VisiPad® is a new *ultra-light* and *ultra-flat* chemical light device designed for a variety of Emergency and Tactical uses.

Easily stored in pockets, pouches or kits, VisiPad® is lightweight, flat and measures just 11,25cm x 6,25cm. VisiPad® has a wide surface area that allows for writing patient information or messages with a traditional marking pen.

The self-adhesive backing allows for placement on patients, personnel, structures or windows. Pre-cut hook and holes allow for hanging on wires or lines. Designed to prevent accidental activation, VisiPad® is the new standard to carry enough markers for any incident, without sacrificing weight or space.
